

RECON 23 Tail Bag Mounting Instructions

Step 1: Study your bike's possible mounting points. This bike does not have any mounting bosses, so we will have to use the passenger peg hangers and a good spot near the turn signals. Mount rear bungee straps as shown in photo.

Step 2: Pull forward bungee straps to the passenger peg hangers.

Step 3: When forward bungee straps are secure, it will pull the bag forward slightly which will tighten the rear straps also.

Step 4: The bag should sit straight on the tail like this.

Step 5: As always, check how secure the luggage is. If bag is not secure, locate better mounting points.
